

Customization

EuroAvionics has the resources, flexibility and ability to design a task management system tailored to the needs of any customer (also on a large scale basis, e.g. whole helicopter fleets). This includes hard- and software customizing. As a developing company we have extensive R&D resources which can be offered to the customer. EuroAvionics has done extensive customizing for many Armed forces, police units and VIP and EMS operators including e.g. special display mounts, independent work stations or special software functions.

Key customers on the customizing sector include for example the French Army, Swiss Army, German Rescue Flight (DRF) and South African Air Force.

Please contact our Sales Department for inquiries for customization.
